

1. **parakai.xml (Data Source)**
  - Information for each zone is stored in the XML file.
2. **main.js (Data Processing)**
  - JavaScript loads the data from the XML file, parses the necessary information, and either stores it in JavaScript objects or binds it to HTML elements.
3. **index.html (Data Display)**
  - The data bound by JavaScript is used to display information in the HTML elements. Users can see the zone information, booking availability, and summary details on the screen.
