- Search Bar:
 - The search bar located at the top of the booking system is used to search for available rooms. For example, you can search for a room suitable for 2 people.
- Layout:
 - On the left, it displays the booking details that the user needs to fill in.
 - On the right, it shows the room numbers that the user can select.
 - The larger the square, the higher the price and greater the capacity of the room. This visually indicates the characteristics of the room based on the square's size.
- Room Selection and Booking Process:
 - The user enters their booking details, views the available rooms, and presses the "Select" button.
 - Once selected, all user details are displayed, and the total price and price per night are calculated.
 - When the user presses the "Confirm" button, a message will be displayed indicating that the booking has been confirmed.
- Room Information Display:
 - Hovering over the room location will display a popup with information about the room, including the price, image, and capacity.
- Booking System Validation:
 - The system follows the assignment requirements, ensuring that users cannot book a room using past dates and that only current or future dates are allowed.
 - It also includes features to check if the booking is available.
